

DUALCIDE P3 RTU B00442

This residual product represents the future of modern insecticide products. This water-based formula has one of the lowest toxicity profiles and highest activity ratings ever assembled in an insecticide. The synthetic pyrethroid Permethrin is not an organo phosphate material like Dursban, Propoxur or Diazinon. It is both safer to use and more effective with residual activity up to 60 days after spraying - twice the usual rate. Extremely versatile, this product is a dual-purpose insecticide capable of effectively controlling both flying and crawling insects in residential, commercial, industrial and agricultural settings. The long list of controlled species includes fleas, lice and their eggs, ticks, ants, flies, mosquitos, cockroaches and many more. It can even be used in fogging applications, space spraying, and crack/crevice treatment. This product may even be applied directly to certain animals for long-lasting control of flies, fleas, ticks, lice and other insects. See Example Label for complete use and application information.
